

1) Complete the following exercises from Myers, Montgomery, and Anderson-Cook:

3.6 part a) only. You may use Excel to perform these calculations.

3.7 show these calculations by hand

3.24 Show the experiment plan with the treatment combinations arranged in groups according to the block level.
Prepare an ANOVA table that shows the evaluation of the Block effect and all four single-factor effects.
Use the information from 3.6a) to obtain a surrogate estimate of experimental error.
